

Work Experience

Texas PREPS Program—December 2017-July 2018

When massive flooding occurred in Houston and other parts of southeast Texas during Hurricane Harvey's landfall and during the days that followed, thousands of residents were displaced. With DSW Homes headquarters in Galveston, we saw first hand the devastation that occurred. Having worked in disaster recovery programs and projects in Texas for close to ten years, we immediately knew we wanted to help.

When the storm cleared and assessment was made, over 48,000 homes were reported damaged, with more than 1,000 that were completely destroyed and more than 17,000 that incurred significant damage.

To immediately help Texans, the Texas General Land Office began the Texas PREPS program. This program allowed for partial repair to residents homes, allowing them to shelter in place until further repairs can be made. As part of this program, DSW Homes completed repairs in 2,923 units, performing services such as cleaning and gutting, treating mold, removing insulation, installing limited heat and air conditioning and more.

Quick Facts

Duration	Dec 2017—July 2018
# of Homes Completed	2,923
